	Urgent	Not Urgent
Important	**Do - (Your MVP)** ● Rolls multiple dice (e.g 10d6) quickly ● A way to roll one roll (e.g 1d20 + 11) multiple times in an expedient manner (via terminal) ● Simple math (e.g 1d20+11-1+1-2) is supported ● A way to save “presents” and have them easily accessible to be rolled over and over	**Schedule - (For V2.0+)** ● Graphical interface ● Integration of PF2e mechanics such as multiple attack penalty, status effects etc ● Integration of DND 5e advantage / fortune effects
Not Important	**Delegate - (Use a library)** ● RNG ● Graphics (use Unity if needed) ● Any data structures if optimizations of searching arrays is needed for some reason	**Delete - (Cut it)** ● Graph of probability of expected output ● Graph of probability of succeeding against a certain DC ● Fancy UI

User inputs a command (e.g roll 1d20+1d4+8)
Script uses regex to determine the variables and adds them to an array
The constituent elements of the roll are determined
The roll is summed together.
Repeat for however many rolls requested
Output result(s) to terminal.
